Amendments to the Claims

The following listing of claims will replace all prior versions and listings of the claims in the application:

Claims 1-22 (previously withdrawn).

Claim 23 (currently amended): A semiconductor device comprising:

a semiconductor layer formed on an insulating layer;

a gate conductor formed on the semiconductor layer;

spacers formed on sidewalls of the gate conductor and on the semiconductor layer;

extension regions arranged in the semiconductor layer on both sides of the gate conductor and

extending under and contacting the spacers and a portion of the gate conductor, wherein a portion of

at least one of the extension regions is exposed at a surface of the semiconductor layer by removing

at least a part of one of the spacers;

diffusion regions formed in the semiconductor layer adjacent to the extension regions such

that a portion of at least one of the extension regions is exposed at a surface of the semiconductor

layer; and

a metal layer formed at least in the exposed portion of the extension region, the metal layer

contacting the semiconductor layer and the exposed portion of the extension region.

Claim 24 (previously amended): The device according to claim 23, wherein the extension regions are

lower doped than the diffusion regions.

Claim 25 (previously amended): The device according to claim 23, wherein the metal layer contacts

at least one of the diffusion regions.

Claim 26 (previously canceled).

Claim 27 (currently amended): The device according to claim 23, wherein a portion of each

extension region is exposed on both sides of the gate conductor at the surface of the semiconductor

layer by removing at least a portion of each spacer and the metal layer is formed in the exposed

portions of the extension regions.

Claim 28 (currently amended): The device according to claim 23, wherein said the extension regions

extend further under the spacers than said the diffusion regions.

Claim 29 (currently amended): The device according to claim 23, wherein said the metal layer and

said the exposed portion of the extension region form a Schottky diode.

Claim 30 (currently amended): The device according to claim 29, wherein said the metal layer

extends into the semiconductor layer.

Claim 31 (currently amended): The device according to claim 30, wherein said the metal layer

extends into a portion of the semiconductor layer below said the extension regions.

Claims 32-33 (canceled).

Claim 34 (new): An integrated circuit disposed on an SOI substrate having a body region,

comprising:

a transistor having

a source diffusion region,

a gate formed over the body region,

a first sidewall spacer disposed on a sidewall of the gate abutting the source diffusion

region,

a drain diffusion region,

a second sidewall spacer disposed on a sidewall of the gate abutting the drain

diffusion region, wherein the first sidewall spacer is thinner than the second sidewall spacer, and

extension regions provided under and contacting the first and second sidewall spacers,

the extension regions contacting the gate and extending further under the gate than the source and

drain diffusion regions, wherein a portion of at least one of the extension regions is exposed at a

surface of the body region by removing at least a part of one of the first and second sidewall spacers;

and

a conductor formed at least in the exposed portion of the extension region, the conductor

being in contact with the exposed portion of the extension region and at least a portion of the source

diffusion region to form a Schottky diode.

Claim 35 (new): The device according to claim 34 wherein the conductor contacts the body region.
